Professional Summary

Software / Performance Engineer with 2+ years building high-scale Java/Spring Boot microservices for a global e-commerce platform (H&M) on Azure and Kubernetes. Blend backend engineering with production observability (Splunk, Dynatrace) and AI tooling to diagnose P1/P2 incidents and automate root-cause analysis — delivered an agentic RCA system at 80–90% accuracy, cutting turnaround from hours to minutes. AZ-104 certified; hands-on with RAG and multi-agent systems.

Technical Skills

Languages: Java (Core/Advanced), Python, SQL/PL-SQL, C/C++, HTML/CSS
Backend: Spring Boot, FastAPI, Django, REST APIs, Microservices, SAP Hybris
Cloud & DevOps: Microsoft Azure (AZ-104), AWS, Kubernetes (AKS), Docker, CI/CD
Observability & Perf: Splunk (SPL), Dynatrace, JMeter, Redis, load & stress testing
Databases: Oracle, PostgreSQL, MySQL, Redis, Vector DBs (ChromaDB/Pinecone)
AI & Data: RAG, Multi-Agent / Agentic Systems, LangChain/LangGraph, Azure OpenAI, M365 Copilot
CS Fundamentals: Data Structures & Algorithms, OOD, Distributed Systems, Complexity Analysis

Professional Experience

Software Developer / Performance Engineer

Gurugram, India

Accenture — Client: H&M (Global Retailer)

2024 – Present

- Engineered high-scale Java/Spring Boot microservices on a distributed e-commerce platform across multiple regions (EU1–EU5, AM, AP), sustaining low latency and resilience under heavy concurrency.
- Built an **AI-driven agentic RCA system** (Python, LangGraph, Azure OpenAI) ingesting Splunk/Dynatrace/OEM/ServiceNow telemetry to auto-generate deterministic RCA docs — **80–90% accuracy**, turnaround cut from **hours to minutes**.
- Led performance validation for the **Azure Cache for Redis → Managed Redis migration** via a JMeter load-test of full user journeys against live master–slave switchovers with Microsoft, **saving 2–3 weeks** and pipeline-procurement cost.
- Built a cross-source **Splunk dashboard** surfacing DB pool and concurrency bottlenecks during P1 campaign events; **adopted by multiple teams**, removing central-queue dependency.
- Drove RCA on P1/P2 majors across ingress, JVM, Redis, and DB layers; authored **KT SOPs and onboarding modules** that standardized ramp-up and removed reliance on senior tenure.

Projects

PE-RCA Agent — Automated Incident Root-Cause Analysis

Python, LangGraph, Splunk, Azure OpenAI

- Hypothesis-driven pipeline (intake → query bursts → correlate → report) grounded on a Splunk query catalogue; outputs review-ready DOCX with charts, tables, and per-run traceability.

Multi-Agent AI C-Suite Advisor

[Project Link](#)

- Backend-first GenAI system (Python, FastAPI) with a RAG pipeline over a vector DB and async multi-agent workflows to ground LLM outputs and cut end-to-end query latency.

Seam Chat — Collaboration Platform

[Project Link](#)

- Developer matchmaking platform (Python, Django, MVC) with skill-based team formation and a schema optimized for user profiles and matching logic.

Certifications & Learning

- Microsoft Certified: Azure Administrator Associate (AZ-104)** — identities, governance, storage, compute, networking.
- AWS Certified Cloud Practitioner** — AWS cloud concepts, security, and core services.
- Reinvention with Agentic AI** (Accenture, powered in part by Stanford HAI) — **Stanford HAI badge**, certified Jan 2026.
- Java Full-Stack (On-Job Training) and AWS Tech Leap — completed. GenAI & RAG pipelines — in progress.

Education

B.Tech, Electronics & Communication Engineering (ECE)

CGPA: 7.42 / 10
